

Will the broadcast flag interfere with consumers ability to make copies of DTV content for their personal use, either on personal video recorders or removable media?

As a consumer it is critical to me, as an artist it is necessary for me and as a low cost independent media maker it is of economic importance to me that dtv be able to be manipulated and copied.

Would the digital flag interfere with consumers ability to send DTV content across networks, such as home digital networks connecting digital set top boxes, digital recorders, digital servers and digital display devices?

I want this data to be unimpeded for my personal entertainment which includes being able to transfer.
